Emergency Sport Pack is designed to provide automatic lighting when utility power is interrupted. The unit utilizes 35 watt metal halide lamp and ballast technologies combined with a unit inverter to provide 90 minutes of lighting distribution to cover bleachers at sporting events allowing spectators to leave safely.

An integral strip heater is incorporated in the wet location listed inverter to keep it operational in all weather conditions. An integral test switch and LED indicator are incorporated in all units for testing.

Call local representatives for details.
